

BIST Ignite programme

6th Edition Call-Ignite Award

Guidelines for participants and evaluators

Goal

The main goal of the [BIST Ignite Programme](#) is to promote new collaborations among BIST Community researchers, facilitating the exchange of knowledge among different scientific fields and exploring new approaches to address complex questions.

Conceptually, the output of the collaborative research projects supported by the BIST Ignite Programme may serve as the foundation for the preparation of joint multi-institutional proposals to apply for external competitive funding.

Description of the programme

The BIST Ignite programme is a mechanism to foster **new collaborative research projects among the BIST Community**. The projects will be aimed at exploring new questions and technological challenges through novel multidisciplinary approaches, exchanging knowledge across disciplines, exposing researchers to multidisciplinary environments, and providing new insights to push the collaboration further. **At least two different BIST Community centres must be involved.**

The BIST Ignite programme is based on a two-stage funding scheme, composed of two progressive calls.

The **Seed stage** is a call for new project proposals open to the full BIST Community. From this initial call, five project ideas will be selected to be funded with 20.000€ each, and researchers will have 8 months to develop them.

The **Ignite Award** is a second phase of exploratory nature and consists of an additional award of 50.000€ to be spent over a period of 12 months, for the two best projects out of the 5 selected during the seed stage. The selection of projects in this second stage is based on both the preliminary results obtained in the previous seed stage and the viability and the justification of continuing the collaboration. Both aspects must be clearly stated in the executive project report to be delivered at the end of the first stage. While in the first seed stage no proof of concept is required, it will be fundamental for the second, exploratory stage.

The two-stage funding scheme is aimed at stimulating the generation, participation, and active contribution of collaborative partnerships among BIST Community centres, as well as setting the basis to promote the generation of a pipeline of new research projects, emerging from ideas and questions that require a multidisciplinary approach.

The BIST Ignite programme wants to **encourage associated researchers and postdocs to participate and lead the application and development of new collaborative research projects**. This programme can be an excellent opportunity for young researchers willing to further their scientific careers.

The participation of groups from institutions that are not part of the BIST Community is possible when they provide expertise otherwise not available within the BIST Community. However, at least two BIST Community Centres must still be involved in the project and external groups need to provide their own funding.

Eligibility criteria

All applications must involve **at least two researchers from two different scientific fields working in two different BIST Community centres. They should be equally committed to the delivery of the proposed activities.**

Associated researchers and postdocs are welcome to apply provided they have clearance and an acceptance letter from their group leader, to be submitted along with the proposal. Non-compliance with this criterion will render the application invalid.

Researchers holding an Ignite grant at the time of the call's closure will not be eligible to participate and, in general, only one project submission per PI is accepted.

Evaluation Criteria

A panel of experts will review the applications for the first "seed" stage analyzing the quality and relevance of the proposal and determining those best matching the objectives of the present call. Three aspects will be considered during the evaluation of the first seed stage:

- Multidisciplinary and added value of the collaboration (40%)
- Novelty, and possible future impact of the idea (40%)
- Viability, both in terms of time and objectives (20%)

Selection process

The evaluation committee consists of both internal (BIST Community) and external experts. The internal reviewers will be appointed by the directors of the BIST Centres.

The evaluation committee will carry out a remote evaluation and will use an evaluation guide with scores and thresholds. All submitted proposals will be reviewed at least by three reviewers, two of them related to the topic, one will be external to BIST Community, and at least one will be a woman.

The final decision on the winning proposals will be taken during a consensus meeting.

Due to limited resources, we are not able to provide individual feedback to unsuccessful applicants.

Closure of the Seed Stage & Application for the Ignite Award

The closure of the Seed Stage and the submission for the Ignite Award will be done simultaneously through the Ignite Award Call. Submission will be done online, using the [Slideroom Portal](#), which will remain open from July 1st

until midnight of September 2nd, 2024 (see calendar below). Access to the portal is also provided through the BIST's webpage <https://bist.eu/research/ignite/>

The application for the joint Closure Seed Stage and Ignite Award consists of three items:

Justification of expenses incurred during the Seed Stage. The template will be available in the BIST's webpage <https://bist.eu/research/ignite/> and shall aggregate the expenses of each center and be uploaded through the slideroom portal. There is no need to send the original invoices. However, the center is responsible for archiving them all and, in case BIST requires them, to present all the originals. Any expenses required for the development of the projects can be presented, except for investment in equipment.

A **scientific report** on the accomplishment of the Seed Stage project (max. 6 pg). The report must highlight the **scientific results and the benefits of collaboration**.

If applying for the Ignite Award, a 2–4-page **proposal detailing the project's next phase**. The continuation budget must clearly indicate the percentage allocated to each centre in case the project is granted. The funds provided can be used to cover any expenses required for the development of the project, except for investment in equipment.

Closure of the Ignite Award

At the closure of the Ignite Award cycle, it shall be submitted a **justification of expenses** incurred and a **scientific report**.

The template for the expense report will be available on the BIST's webpage <https://bist.eu/research/ignite/> . It shall aggregate the expenses of each center and be uploaded through the slideroom portal. There is no need to send the original invoices. However, the center is responsible for archiving them all and, in case BIST requires them, to present all the originals. The funds provided can be used to cover any expenses required for the development of the projects, except for investment in equipment. The scientific report must highlight the **scientific results and the benefits of collaboration**.

Communication with applicants

The project leaders will receive reminders in a timely manner about call opening/closing for each stage (Seed and Ignite Award). Administrative personnel will not receive any reminders from BIST. It is the responsibility of the applicants to contact their administrative personnel to obtain their expense report and submit it with the rest of the materials when the closure of the stage is due.

Questions about the Ignite Programme may be addressed to the BIST Head of Strategy Development, Núria Royo (nroyo@bist.eu)

BIST Ignite 6th Edition Programme Calendar- Ignite Award

1 July – 2 Sep 2024	Ignite Award Call
3 Sep. – 6 Oct. 2024	Remote Evaluation Ignite Award
7 Oct. – 14 Oct. 2024	Consensus Meeting Ignite Award
15 Oct. – 31 Oct. 2024	Ignite Award Call Resolution*
1 Nov. 2024 – 1 Nov. 2025	Ignite Award Research Project Development
1 Dec 2025	Deadline for Ignite Award closure submission

*The public announcement of the Call's results, might be delayed to make it coincident with the BIST Forum 2025 (January).
